

TOWN PLANNING

The art and science of ordering the use of land and siting of buildings and communication routes so as to secure the maximum practicable degree of economy convenience, safety beauty, to protect self from the weather and other living beings

History of town planning

City Development in Ancient and Medieval India) divide urbanisation and city development in pre-colonial India into three time periods: ·

The pre-historic (2350 to 1800 BC)

· Early historical period (600 BC to 500 AD)

· Medieval period (600 AD to 1800 AD)

ANCIENT PERIOD

a) INDUS VALLEY CIVILIZATION

b) VEDIC PERIOD

c) BUDDHIST PERIOD

b) MEDIEVAL PERIOD

c) MUGHAL PERIOD

d) PRE-INDEPENDENCE PERIOD

f) POST INDEPENDENCE PERIOD

Ancient period is considered to be between 3000-5000 bc . in this period, so many towns were created with some unique features. development of towns taken place like

1. indus valley civilization

2. vedic towns

3. buddhist towns is considered to be the ancient period

The origins of urban planning in India can be traced to the planned towns of Mohenjodaro and Harappa belonging to the Indus Valley Civilisation as early as 2500 BC(Ramachandran 1989). Cities and towns werealso built around forts and centres of trade and commerceat various periods in the history of India.

Archaeological Survey of India has documented town planning structure dating back to 2600 BCE. Sindhu-Saraswathi

Civilization or the Indus Valley Civilization – Harappa Mohenjodaro site = 25 hectares = 60 acres

Cities of the Indus Valley civilisation, such as Harappa, Mohenjodaroand Lothal followed a system of town planning with similarities in their layouts on a rectilinear basis of main east-west routes directed to the citadels and north-south cross routes (Morris 1979). These cities were also the earliest instances of gridiron town planning. The city proper consisted of two components– a citadel, built on high ground and a lower city where the majority of the population lived

vedic period: (400 BCE) •in this period, vedas as well as books were wrote on town planning. •in “vishwakarmaprakash” it was stated that “first layout the towns and then plan the houses.” •“shilpshastra” wrote by “architect mansara” discussed study on soil, topography, climatology and various layouts like dandaka, swastika, padmaka, nandyavarta. dandika style nandyavarta style

Buddhist period: (up to 320 CE) •during the period of emperor chandragupta maurya, kautilya and chanakya was the chief minister who wrote the famous “arthashastra”, a treatise of town planning

Medieval period: (350-1500 CE) early medieval town was dominated by church or monastery & castle of lords. 2.for protective measures, towns were sited in irregular terrain, occupying hill tops or islands. towns assumed informal & irregular character.

During the Mughal period (1526-1800 CE) the growth of capital cities, building of forts, large residences and buildings, palaces and mosques became essential features of cities like Agra, Delhi, Sikandra, Shahjahanabad in the north and Hyderabad and Ahmedabad furtherSouth.

Urban Planning under British Rule in India During the colonial era, up to the early 20th century, cities were consciously laid out for 4 military and political dominance.The concerns of public health and sanitation, spatial and social segregation, colonial dominance, and control were the underlying ideas of colonial planning in India

Post-independence period: (after 1947) •after independence, jawaharlal nehru was appointed as the first prime minister of india. he invited le corbusier to visit india and develop cities

A typical Indian town consisted of the following:

1. Market
2. Street
3. Public Buildings
4. Residences
5. Temples
6. Royal Palace
7. Recreational Centers
8. Tank
9. City Fort

Planning of a town is dependent on the various factors:

1. Soil Type
2. Climatic Conditions
3. Topography
4. Wind Orientation
5. Orientation to Take Advantage of Sun and Wind
 - The towns were highly influenced by the Site conditions.
 - The towns were generally located along the bank of the water body.
 - A flowing stream was preferred for Sanitary requirements.
 - The towns on the river edge were OBLONG shape; to take maximum advantage of the river.
 - Main Street (King/ Raja Marg) were aligned East-West to get roads purified by the Sun's rays; while the shorter roads were along North — South.

* The crematoriums are outside the city at designated places (not shown in the figure)

TOWN PLANNING SYSTEM OF INDUS VALLEY CIVILIZATION (HARAPPAN CIVILIZATION)

Indus Valley Civilisation also referred to as Harappan civilization and Saraswati Sindhu Civilization. It was situated between Indus River and the Ghaggar - Hakra River (Pakistan and North Western India).

Mohenjodaro was one of the major settlements in this area

Main features of town planning in indus valley civilisation :-

1. Streets in perfect grid patterns in both Mohenjodaro and Harappa.
2. World's first sanitation system.
3. Individual wells and separate covered drains along the streets for waste water.
4. Houses opened to inner courtyards and smaller lanes.
5. Impressive dockyards ,granaries, warehouses, brick platforms and protective walls.
6. Massive citadels protected the city from floods and attackers.
7. City dwellers were mainly traders and artisans.
8. All the houses had access to water and drainage facilities.

TOWN PLANNING IN MOHENJODARO

1. No fortification(walls, towers).;- military construction designed for the defense of territories in warfare,
 2. Major streets In North South direction.
 3. Intersection at right angles.
 4. Streets within built up areas were narrow.
 5. Distinct zoning for different groups.
- CONSTRUCTION TECHNIQUES IN MOHENJODARO :-
 - Buildings – masonry construction by Sun dried bricks.
 - Ranging from 2 rooms to mansions with many rooms.
 - Underground sewerage & drainage from houses.
 - Helical pumps for pumping water in Great bath.
 - Principal buildings – monastery & bath - indicating religious culture.

Ancient town classification

1. Dandaka
2. Sarvathobhadra
3. Nandyavarta
4. Padmaka
5. Swastika
6. Prastara
7. Karmuka
8. Chaturmukha

DANDAKA  ▪ Small Village – Square + Rectangular. ▪ Gates On all sides.	SARVATHOBADRA  ▪ Large Village & Town. ▪ Square Site. ▪ Temple is in centre.	NANDYAVARTA  ▪ No Village Only TOWN. ▪ Circular/ Square Site. ▪ Temple is in centre. ▪ Nandyavarta - Flower	PADMAKA  ▪ Town + Fortress around ▪ Plan – Lotus Petals ▪ Island + MOAT
SWASTIKA  ▪ Site – Any shape ▪ Diagonal Streets ▪ Rampart Wall + MOAT ▪ Inspiration Swastika ▪ Temple - Centre	PRASTARA  ▪ Site – Either Square or Rectangle ▪ Segregation for Rich And Poor	KARMAKA  ▪ Site – Semi Circular+ Parabolic + At River Bank+ Bow Shaped ▪ Streets At Right Angle Forming Various Blocks	CHATURMUKHA  ▪ Largest Town to Smallest Village ▪ Site – Square + Rectangle ▪ Temple - Centre

i) Dandaka

Dandaka is a Sanskrit term that refers to a type of town plan shaped like a staff or rod. In ancient Indian town planning, different shapes and designs were used to symbolize different things and to promote specific qualities in the built environment.

The Dandaka town plan was characterized by its straight lines and regularity, which symbolized stability and order. This type of plan was often used in the design of military fortifications and other structures that required a strong and orderly layout.

The Dandaka plan was also believed to promote positive energy and to enhance the functionality of the structures it was used in.

Dandaka. Literally means a village that resemble. a staff. Its streets are straight and cross each other at right angles at the center. running west to east, and south to north. This type of town plan provides for two main entrance gates and is generally adopted for the formation of small towns and villages Village is Rectangular / Square with street width of street varies from 1-5 Banda. • Village office located in the east

Female deity (Gramadevata) will generally be located outside the village, whereas Male deities in the northern portion.

ii) Sarvathobadra

Sarvathobadra is a Sanskrit term that refers to a type of town plan shaped like an umbrella. In ancient Indian town planning, the umbrella shape symbolized protection and shelter. The Sarvathobadra town plan was characterized by its circular shape and radiating streets, which provided a sense of harmony and balance to the built environment.

This type of plan was often used in the design of religious and spiritual structures, such as temples and ashrams, where people sought refuge and peace. The circular shape of the Sarvathobadra plan was also believed to promote positive energy and to enhance the functionality of the structures it was used in.

This type is applicable to larger villages and towns, which have to be constructed on oblong or square sites. • The whole town should fully be occupied with HOUSES of various descriptions that should be inhabited by all classes of people. • Temple dominates the village.

iii) Nandyavarta

Nandyavarta is a Sanskrit term that refers to a type of town plan that is circular with a central square and streets radiating outwards. This type of town plan was commonly used in ancient India, particularly in the design of cities and

large settlements. The circular shape of the Nandyavarta town plan symbolized unity and completeness, while the central square served as a gathering place for the community.

Mainly used for construction of TOWNS and not villages.

Adopted for sites which are either circular or square in shape with 3000- 4000 houses.

The streets run parallel to the central adjoining streets with the temple of the presiding deity in the center of the town.

Temple of the presiding deity at the center of the town.

This name is derived from a flower, the form of which is followed in this layout.

iv) Padmaka (Lotus Petals)

Padmaka is a Sanskrit term that refers to a type of town plan shaped like a lotus flower. In ancient Indian town planning, the lotus flower was a symbol of purity, enlightenment, and beauty. The Padmaka town plan was characterized by its circular shape, with streets radiating outwards in a petal-like pattern. This type of plan was often used in the design of religious and Spiritual

This type of plan was practiced for building of the TOWNS with fortress all around.

Patter of the PLAN resembles petals of lotus radiating outwards from the center.

The city used to be an island surrounded by water.

No scope for expansion.

v) Swastika

Swastika is an ancient Hindu symbol that is widely used in Hindu architecture and town planning. The word “swastika” comes from the Sanskrit word “svastika,” which means “good fortune” or “well-being.” The symbol consists of four arms that are bent at right angles. arranged in a cross-like pattern. The arms are typically of equal length and can be arranged clockwise or counterclockwise.

« This type of plan contemplates some diagonal streets dividing the site into certain triangular plots.

« The site may be of any shape.

« The town is surrounded by a rampart wall. with a MOAT at its foot.

« Two main streets cross each other at the center running north to south and west to east.

« Temple is at the centre.

vi) Prastara

Prastara is a Sanskrit term that refers to the arrangement of tiles or stones used in the construction of floors or pavements. In ancient Indian architecture and town planning, the prastara was an important decorative element that was used to create intricate and beautiful patterns on the floors of buildings.

« The characteristic feature of this plan is that the site may be either square or rectangular but not triangular or circular.

« The sites are set apart or the very rich, rich, middle class and poor.

« The size of the site increases according to the capacity of each to purchase or build upon.

« The main roads are much wider when compared to those of other patterns.

« The town may or may not be surrounded by a fort.

vii) Karmuka

This refers to a town plan that is shaped like a bow.

This plan is suitable for the place where the site of the town is in the form of a bow or semi-circular or parabolic and mostly applied for towns located at sea shores or riverbanks.

« The main streets of the town run from north to south or east to west and the cross streets run at right angles to them.

This divides the whole area into BLOCKS.

« Female deity (the presiding deity) is installed in the temple built in any convenient place.

viii) Chaturmukha

Chaturmukha is a Sanskrit term that refers to a building or structure that has four faces or entrances. In ancient Indian town planning and architecture. Chaturmukha structures were used for a variety of purposes, including as temples, gateways, and other religious or secular buildings.

The four faces of a Chaturmukha structure symbolized the four cardinal directions. and were believed to provide protection and access to the building.

This is applicable to all types of towns (from the largest town to the smallest village).

The site may be either square or rectangular having four faces.

The town is laid out east to west lengthwise with four main streets.

The temple of the presiding deity is always at the center.

ARCHITECTURE & SCULPTURE

Architect Derived from the Latin word 'tekton' which means the builder. Refers to construction and designing of buildings

Ancient Indian Architecture dates back to the Indian Bronze Age until about 800 CE. By the time India reached this point, Buddhism had significantly diminished, • Hinduism had predominated, and religious and secular architecture styles had developed, with significant regional variations.

•The Indus Valley Civilization saw the emergence of its first cities during the Bronze Age. Northern Black Polished Ware and the construction of walled settlements signaled the beginning of urbanization in the Gangetic plains as early as 1200 BC. • The use of stone in Indian architecture and the circulation of Indian currency were characteristics of the Mahajanapada era. The Mauryan era is regarded as the start of India's classical building era.

Ancient Indian architecture is divided into five major sub-parts:

1. Harappan Art and Architecture
2. Mauryan Art and Architecture
3. Post Mauryan Architecture
4. South Indian Architecture

ARCHITECTURE HARAPPA

building materials - mud bricks and baked bricks, wood and reeds. the average size of the bricks was 7 x 12 x 34 cm (for houses) and 10 x 20 x 40 cm for the city walls. the larger bricks have a standard ratio of 1:2:4.

mud brick, baked brick & wood or stone were used for the foundation and walls of the houses. the doors ,windows were made from wood and mat. house floors -hard-packed earth .bathing areas and drains - baked brick and stone.

roofs -wooden beams covered with reeds and packed clay. □ largest buildings made entirely of wood.

windows – shutters & lattice work

1. large public structures
2. large buildings -administrative or ritual structures.
3. access routes or provided thoroughfare from one area to another.
4. markets and public meetings held in large open courtyards.
5. houses and public buildings grouped with shared walls and formed larger blocks & accessed by wide streets.
6. most houses had private baths &toilets as well private well

MAURYAN ARCHITECTURE

- Mauryan architecture refers to the architectural style prevalent during the Mauryan Empire, which flourished in ancient India from around 322 BCE to 185 BCE. During the Mauryan rule, a new phase of cultural history emerged.
- Monumental stone sculpture and architecture became prominent. The adoption of Buddhism by Ashoka promoted the creation of distinctive sculptural and architectural styles.
- This led to the creation of Stupas(dome-shaped structure), Pillars, Caves, Palaces, and Potter. These artistic and architectural works were connected to the lives, activities, and patronage of ordinary people.
- Stupas were important religious structures. Pillars were created as memorials, and edicts of Ashoka were inscribed on them.
- Caves were used for meditation and worship. They had intricate carvings and sculptures adorning their interiors.
- Palaces were grand structures that were home to the king and the royal family. They often had gardens and courtyards. Potters played an important role during the Mauryan period. They created various types of pottery, including terracotta figurines and utensils

POST MAURYAN ARCHITECTURE

- **The era following the decline of the Mauryan Empire (second century BC) heralded significant changes in Indian art and architecture.**

- This period was marked by the rule of various dynasties such as the Shungas, Kanvas, Kushanas, and Guptas in the north and central India, and the Satavahanas, Abhiras, Ikshvakus, and Vakatakas in the south and western India.
- Architectural Developments
- The Post-Mauryan period saw the emergence of early temples, a shift from the predominantly stupa-based architecture of the Mauryan era. These temples often featured images of gods and narratives from Puranas. The architectural styles varied, with Sandhara, Nirandhara, and Sarvatobhadra being the prominent ones.
- Southern Indian Contributions
- The Southern part of India, particularly the Vengi region in Andhra Pradesh, was known for its stupas, most notably in Amaravati. The Amaravati School of Art developed during the Satavahana period and was known for its intricate and emotional sculptures, often depicting scenes from Buddha's life.

GUPTA ARCHITECTURE

- From the beginning of the fourth century CE to the end of the sixth century CE, the Gupta Empire ruled over ancient India. From roughly 319 to 467 CE,
- The **earliest religious buildings** were cave-temples with one carved doorway and sculptures on the outside. Inside, there were sculptures for rituals, like the **Shiva linga**, and **walls carved with stories**.
- **Ajanta caves (a UNESCO World Heritage site)**, a group of **29 rock-cut caves** in **Maharashtra**, contains paintings exhibiting Buddha's journey. Here are also instances of **mural paintings and fresco technique painting**.
- **Ellora caves** in **Charanandri hills** are a group of **34 rock-cut caves** that **exhibit Brahminical (Hindu), Jain, and Buddhist philosophy** through art. All caves were built from the 6th to 12th century. Built during **Kalachuri, Chalukya and Rashtrakuta dynasty**
- **Elephanta caves: UNESCO World Heritage site. First group of caves is Hindu and the second group is Buddhist.**
- **Bagh caves in Dhar district, Madhya Pradesh**, consist of **9 caves** together. These Buddhist caves are also known as Bagh Gupha.
- **Pandav caves (B.C.250- A.D.600) in Nashik are in Trirashmi hill.** These caves are magnificent examples of ancient water management systems and buddha sculptures

TEMPLE ARCHITECTURE

- Historically, temples in India served as centres of worship, spiritual practice, and community gatherings. Initially, they were built as simple structures and later evolved into more elaborate and intricate architectural marvels
- The architectural principles of temples in India are described in Shilpa Shastras and Vastu Sastras.
- While sandstone is the commonest building material, a grey to black basalt can be seen in some of the tenth to twelfth century temple sculptures
- Rich in art and architecture, temples became bastions of cultural preservation. Sculptures, paintings, and literature flourished within their walls, reflecting the cultural ethos of the times.
- The temple architecture has evolved over the ages and the style changes along with the changing dynasties and region. While the architecture of Hindu temples varies from region to region, the major components of a temple remain constant:

Temple Architecture and Types

The Gupta royals were originally Hindu Brahmins who worshipped Vishnu deities in North and Central India, Shiv in South India, and Shakti deities in Bengal.

Five types of temple architecture evolved during this time:

1. First type: Square temples with flat terraces, surrounded by pillars, with an entrance, garbhagriha, and mandapa. Example: Kankali Devi temple at Tigawa.
2. Second type: Similar to the first, but with a Pradakshina area and two-storeyed temples, like the Shiva temple in Bhumara.
3. Third type: Square temples with a pyramidal roof (shikhara), higher platform, seen in the Dashavatara temple with ten incarnations of Lord Vishnu.

4. Fourth type: Rectangular temples with a hollow roof, such as the Kapoteswara temple.
5. Fifth type: Circular temples with distinct corners creating a rectangular pattern, like the Maniyar Math in Rajgir

Elements of Hindu Temples

Garbhagriha	literally means ‘womb-house’ and is a cave like sanctum Garbhagriha is made to house the main icon (main deity)
Mandapa	- It is the entrance to the temple - May be a portico or colonnaded (series of columns placed at regular intervals) hall that incorporate space for a large number of worshipers - Some temples have multiple mandapas in different sizes named as Ardhamandapa, Mandapa and Mahamandapa
Shikhara or Vimana	- They are mountain like spire of a free standing temple - Shikhara is found in North Indian temples and Vimana is found in South Indian temples - Shikhara has a curving shape while vimana has a pyramidal like structure
Amalaka	a stone disc like structure at the top of the temple shikara
Kalasha	topmost point of the temple above Amalaka
Antarala (vestibule)	a transition area between the Garbhagriha and the temple’s main hall (mandapa)
Jagatia	raised platform for sitting and praying
Vahana	vehicle of the temple’s main deity along with a standard pillar or Dhvaj

- There are three broad styles of Indian temple architecture:
 1. Nagara (northern style),
 2. Vesara (mixed style), and
 3. Dravida (southern style).

Nagara

- Style of temple architecture that became popular in northern India
- Nagara, or North Indian, temple architecture originated in northern India in the 5th century AD during the Gupta period.
- It's characterized by tall, pyramidal towers called shikharas, which are topped by a bulbous finial called a kalasha.
- style also includes intricate carvings and a curved profile that reflect Hindu cosmology and religious symbolism
- Prominent features → Shikaras (Spiral roofs), Garbhagriha (sanctum) & Mandap (pillared hall)
- Thus the two major characteristics of this style are the cruciform ground plan and the curvilinear tower

Vesara Style of Architecture

- Ornamentation(decorative elements) The Chalukyan temple exhibits indigenous qualities in terms of the temple walls and pillar ornamentation.
- The Chalukyan builders altered the Dravida towers by reducing the height of each storey and arranging them in declining order of height from base to top, with a great deal of embellishment on each floor.
- Nagara Tower Transformation: Instead of an inclined storey, the vertical shape of the tower has been changed.
- Mantapa and Pillars are two unique elements of Chalukya temples:
- Mantapa: The mantapa features two types of roofs: domical ceilings (which have a dome-like appearance and are supported by four pillars) and square ceilings (these are vigorously ornamented with mythological pictures).
- Pillars: the Chalukya temples' small ornamental pillars have their unique aesthetic significance.

Dravida (southern style).

- The temple is enclosed within a compound wall.
- **Gopuram**: The entrance gateway in the centre of the front wall.
- **Vimana**: The shape of the main temple tower. It is a stepped pyramid that rises up geometrically (unlike the Nagara style Shikhara that is curving).
- In the Dravida style, **shikhara** is the word used for the crowning element at the top of the temple (which is shaped like a stupika or octagonal cupola).
- At the entrance to the garbhagriha, there would be sculptures of fierce **dvarapalas** guarding the temple.
- Generally, there is a **temple tank** within the compound.
- **Subsidiary shrines** could be found wither within the main tower or beside the main tower.
- In many temples, the garbhagriha is located in the smallest tower. It is also the oldest. With the passage of time and the rise of the population of the temple-town, additional boundary walls were added. The newest structure would mostly have the tallest gopuram.
- Example in the **Sriranganathar Temple** at Srirangam, Tiruchirappally, there are 7 concentric rectangular enclosure walls each having gopurams. The tower at the centre has the garbhagriha.
- **Famous temple towns of Tamil Nadu**: Kanchipuram, Thanjavur (Tanjore), Madurai and Kumbakonam.
- In the 8th to 12th centuries – temples were not confined to being religious centres but became administrative centres as well with large swathes of land.

CAVE ARCHITECTURE

- Cave architecture has a long and rich history in India, dating back to the 2nd century BC. Caves carved out of stone cliffs served as dwellings, places of meditation and worship.
- **The Ajanta Caves** were constructed between 200 BC and 658 AD.
- The Ajanta Cave consists of 29 Caves, 25 are Viharas, also known as residence caves, and 4 are used as Chaitya, which are known as prayer halls.
- **Ellora Caves**: They are rock-cut Caves.
- It is famous for the Kailash Temple, the largest Monolithic excavation in the world. Krishna I built the Kailash temple.

- These caves form part of the Sahyadri ranges of the Western Ghats. It consists of 34 caves, of which 17 relate to the Brammarical faith, 12 are Buddhist, and 5 are Jains.
- There is a presence of a double-storey case at Ellora. Also, triple-storey caves can be seen. There is a presence of courtyards in the temples since these were carved out on the sloping sides of the hill.
- **Barabar Caves** are situated in the hilly area near Makhdumpur, 25 km south of Jehanabad district, Bihar.
- Barabar caves can be dated back to the 3rd Century BC to the times of the Mauryan Empire (322 BCE -185 BCE).
- Barabar Caves were constructed by emperor Ashoka for the use of Ajivaka ascetics.

VASTU SHASTRA

This science draws you to live and work in a most scientific way by taking advantage of the benefits showered on you by nature, 5 elements and 8 directions in order to gain peace, prosperity, health, wealth & happiness in your life

- **Component / Elements of Vaastu Shastra:**
- Vastu Shastra is based on the five essential elements –
 1. Prithvi (earth),
 2. Agni (fire),
 3. Tej (light),
 4. Vayu (wind) and
 5. Akash (ether),
- which are known as panchabhutas.

The whole universe including the earth and the human body is considered to be made out of these five elements that affect the cosmic forces and the forms of energies

Light or Agni – Enough natural light to live comfortably (essential to create energy.)

Vayu, or air– is continuously ventilated throughout the house (essential to sustain energy.)

Water or Jal– For hydration and survival (essential for life.)

Earth or Prithvi– Our inside organs are impacted by the magnetism of the Earth's poles.

Aakash. Energy is drawn from space,

Directions of Vaastu Shastra

- **The North-East (NE) is assigned to Water :** Have a bore well, underground water tank in that position.
- **The South-East (SE) is assigned to Fire :** Have your kitchen, pantry, furnace, boiler there.
- **The North-West (NW) is assigned to Air :** There have a guest-room bed room for unmarried girls or a store for finished goods .
- **The South-West (SW) is assigned to Earth :** It is the most stable of all elements. Keep it heavy and this is the best place for master Bed Room.
- **The Centre is assigned to Space :** Have the least possible activity in this area

Directions In The Plot And Buildin

North West adobe of Air/Wind	North adobe of Kuber	North East ruled by Sadasiva
West adobe of Varuna	Brahmasthan place of Brahma	East ruled by Indra
South West adobe of Putna	South adobe of Yama	South East habitat of Fire

Basic Principles of Vaastu

FORM OF ENERGY	ELEMENT
SOLAR	FIRE
WIND	AIR
RAIN	WATER
GRAVITATIONAL / MAGNETIC	EARTH
SOUND	SPACE

1. Since the whole universe is a composition of five basic elements: Fire, Air, Space, Earth and Water.
 2. Through these, our body receives Internal Energies in the form of Proteins, Carbohydrates, Fats etc. and External Energies in the form of Heat, Light, Sound, Wind and so on .
 3. The basic principles of Vaastu enables us to achieve balance among these ; giving more flexibility of body & mind for a better life .
 4. When the harmony between these elements gets disturbed our energies get dissipated in different directions leading to stress, tension and ill health and our peace of mind is destroyed.
 5. We then have to redirect our Energies subjectively as well objectively , so as to achieve an equilibrium between Internal / External Energies, to attain a healthy body and a happy mind leading to health, wealth, happiness, prosperity and success
- Planning of a building according to Vaastu pre-supposes certain principles.
 1. Aspect.
 2. Prospect.
 3. Privacy.
 4. Furniture requirement.
 5. Roominess.
 6. Grouping.
 7. Circulation.
 8. Sanitation.
 9. Flexibility.
 10. . Elegance.
 11. Economy.
 12. . Practical considerations

1	Aspect:	Aspect: The manner of arrangement or peculiarity of arrangement of the doors and windows in the external walls of the building is termed as aspect.
2	Prospect	Prospect: It is to enrich the outside view .
3	Furniture requirement:	Furniture requirement: While planning a building, furniture arrangements must be shown to justify the size of a room.
4	Roominess:	Roominess: Room should have all proportional dimensions. A square room has no advantage and a rectangular room of the same floor area gives a better outlook. Similarly height also plays an important role
5	Privacy:	Privacy: Privacy is the screening provided for the individuals from the others. It is different from seclusion.
6	Grouping:	Grouping: Grouping is the planning of two or more related rooms in proximity of each other. It minimizes the circulation and at the same time improves the comfort, privacy and convenience of the inmates of the house
7	Circulation:	Circulation: Circulation is the access into or out of a room.
8	Sanitation	Sanitation: It is the provision and upkeep of the various components of a house to keep the inmates cheerful and free from disease.
9	Flexibility:	Flexibility: Flexibility means that a room which is planned for one function can be used for other, if so required.
10		Elegance: Elegance is the grand appearance of a building attained mainly owing to the elevation which in turn depends on the plan. Selection of site for the building greatly affects the elegance.
11	Economy:	Economy: The building should have minimum floor area with maximum utility. It will reduce cost and hence will be economical. Practical considerations

HOW TO EVALUTE HOUSE MAP

APPLICATION OF VASTUSASTRA

1. site planning
2. proportionate measurements
3. doctrine of orientation
4. planning of residential space according to directions
5. designing of building
6. aesthetics of the building
7. to remove defect in structure
8. building such as houses, buildings, forts, bungalows, cities, and industries

THE BENEFITS OF VASTU SHASTRA

Spiritual benefits:

- God's grace
- Inner satisfaction
- Self awareness & realization
- Inner peace
- Harmony in life

Physical Benefits:

- Material pleasures
- Health
- Luxuries of life & comfort
- Fulfilment of desires
- Wealth & prosperity

Psychological benefits:

- Harmony in relationships
- Ensuring healthy mind, body & soul
- Eliminating worries & providing inner peace
- Promotes wellbeing
- Encourages stress free life

You will hardly find a person who will refuse to have all these in his life. Vastushastra principles are **free** from any religion, race or caste or community & it serves only one religion and that is **Mankind**.

The potential disadvantages include:

- Vulnerability: The northeast is also associated with water, so a main gate in this location could potentially be more susceptible to flooding or other water-related issues, depending on the specific site conditions.
- Feng Shui conflicts: In some cases, the northeast gate placement may conflict with the optimal Feng Shui configuration for the overall layout and energy flow of the property. A skilled Vasthu practitioner would need to evaluate the full context.
- Access challenges: Depending on the property layout, placing the main entrance in the northeast may create inconvenient access or circulation issues for residents, especially if it is not the most direct route from common approach points.
- Difficult to apply always

ASTROLOGY

DEFINITION

ASTROLOGY – JYOTISH= JYOTI AND ISHA

JYOTI – LIGHT/SOUL

ISHA= GOD

Jyotish is the science of light, both the light of the celestial bodies and the internal light of the soul .Jyothishya – Study of effect of stars and planet on living being on Earth or a Pseudoscience

Astrology is the study of the meaning and application of the influences of the planets, stars and other celestial bodies in our lives

It contains the idea of an organized body of knowledge of the cosmos, and the way the stars “speak” to us. Astrology has found that the symbolic relationships between the heavenly bodies are significant and can be seen as a map to human destiny. It can give us insight into all manner of situations, from the political to personal and the most intimate to the most mundane. Everything has a spiritual connection.

The movement of planets (grahas) in different houses and rashis play a very decisive role in human life. Placement of grahas in different houses of the birth chart give indications about some future events

The promises reflected in a birth chart may be fulfilled only in the dasha/ antardasha of the planets showing that promise. The exact time of fulfilment of these promises depends on the motion of planets in different houses of the horoscope.

Each House is associated with a particular set of stars and a particular planet, and there is precision in their movement and hence there is a net effect on the living beings on earth

Importance of Astrology

Astrology is an important part of history, as well as our daily lives.

Astrology can also predict future events to some degree. It influences our moods, the moods of others, and the reactions that we have to everyday occurrences.

The importance of astrology lies in the direct influence that the moon, sun, and stars play in our lives. Our lives are affected by many people and events.

HISTORY

vedic astrology uses extremely accurate astronomical calculations to determine the positions of the stars and the planets to predict the future of individuals as well as mundane affairs; therefore, jyotish is referred to as predictive astrology.

History Indian astrology has evolved long before the astronomers and astrologer from the West were born.

It is very old, its very roots can be traced back to the Vedas which date as far back as 1500 BC. Many Rsis such as Vashistha, Bhrgu, and Garga were masters of astrology and taught it to their disciples in the Guru parampara .

Before the beginning of the present age, Kali-yuga, which began in 3102 B.C., Parasara Rsi milked the essence of the various schools of Vedic astrology present at his time and distilled it into his text known as the Brhad Parasara Hora Sastra

Indian astrology is also known as Hindu astrology and Vedic astrology. Indian astrology is based on the knowledge gained by ancient Indian sages and saints regarding the movements of the planets and the influences that these movements and positions have on our daily lives.

The present and future positions of the planets are compared with those of your birth chart to predict your future. This is the basis of Indian Astrology

Basic Principles

- **The basic premise of Vedic astrology is that all things are linked.**
- **An individual's karma or fortune is determined by a pre-arranged cosmic design.**
- **An individual is a soul incarnating in a body at a specific place and a particular time; a person's life is a reflection of the greater whole into which he /she is born.**
- **In Vedic Astrology there is greater emphasis placed on the Moon than on the Sun.**
- **The moon represents the mind; it is an agency of perception and consequently is a major determining factor in a person's interactions with the world**

TYPES
