

Jyothishya

Study of effect of stars and planet on living being on Earth

Each House is associated with a particular set of stars and a particular planet, and there is precision in their movement and hence there is a net effect on the living beings on earth

Every being born on the surface of the earth at a given time and place have certain permanent characteristics (C') and certain characteristics which change with time/place/people (C''). Effective Personality = $C = C' + iC''$

We readily believe that the Dielectric Constant (E) is a complex number

E' is the real and E'' is imaginary and the equation is $E = E' + iE''$

Man is unable to predict weather

accurately, cannot predict earthquake, volcanos and many more; so he is unable to understand the JYOTHISHYA TEXTS.

Stars (Nakshatras) in Vedic Astrology		
1. Ashwini	10. Magha	19. Mula
2. Bharini	11. Purvaphalguni	20. Purvashada
3. Kritika	12. Uttraphalguni	21. Uttrashada
4. Rohini	13. Hast	22. Sharavana
5. Mrigshira	14. Chitra	23. Dhanishtha
6. Adra	15. Swati	24. Shatbhisha
7. Punrvasu	16. Vishakha	25. Purvabhadrapad
8. Pushya	17. Anuradha	26. Uttrabhadrapad
9. Ashalesha	18. Jayeshtha	27. Revati

9 Planets (Grahas) in Vedic Astrology	
English	Hindi
Sun	Surya
Moon	Chandra
Mars	Mangal
Mercury	Budha
Jupiter	Brihaspati
Venus	Shukra
Saturn	Shani
Rahu & Ketu	Rahu & Ketu

Rashis in Vedic Astrology			
English	Hindi	English	Hindi
1. Aries	Mesha	7. Libra	Tula
2. Taurus	Vrishabha	8. Scorpio	Vrishchika
3. Gemini	Mithuna	9. Sagittarius	Dhanu
4. Cancer	Karka	10. Capricorn	Makara
5. Leo	Simha	11. Aquarius	Kumbha
6. Virgo	Kanya	12. Pisces	Meena

Mass of earth, $m_e = 6 \times 10^{24}$ kg

Mass of moon, $m_m = 7.2 \times 10^{22}$ kg

Center to center distance of earth and moon, $r = 3.84 \times 10^8$ m

Step 2: Finding gravitational force between earth and moon:

Force of gravitation between earth and moon is calculated by using the formula of Newton's law of gravitation-

$$F = G \frac{m_e m_m}{r^2} \quad (1)$$

where G is universal gravitational constant which is equal to $6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$

Putting the values in the equation (1), Calculating the value of force-

$$F = 6.67 \times 10^{-11} \frac{(6 \times 10^{24}) (7.2 \times 10^{22})}{(3.84 \times 10^8)^2}$$

$$F = \frac{6.67 \times 6 \times 7.2}{3.84 \times 3.84} \times 10^{19}$$

$$= \frac{288.14}{14.75} \times 10^{19}$$

$$= 19.53 \times 10^{19}$$

$$= 1.95 \times 10^{20} \approx 2 \times 10^{20} \text{ N}$$

Hence, the gravitational force between earth and moon is $2 \times 10^{20} \text{ N}$.

- Earth Diameter : 12742 km; Speed of Rotation: 1670 km/hr = 460 m/s
- India = East to West = 3500 km and North to South it is = 3800 km
- Distance between Earth and Sun = 150 million km = 150×10^6 km

Min = 147×10^6 km and Max. 152×10^6 km

- Distance between Earth and Moon = 3,50,000 km

Min = 363,300 km Max = 405,696 km

THE CONCEPT OF CHART WAS DEVELOPED TO DETERMINE THE RELATIVE POSITIONS OF THE PLANETS.

Time taken for Earth to go around the sun = 1 year

Saturn = 30 years

Jupiter = 12 years

Mars = 2 years

Venus = 0.6 year = approx. 7 months

Mercury = 0.25 year = 4 months

Rahu & Ketu = 19 years

Star = 13.33 deg

Total number of Stars = 27 stars

One house = 30 deg.

Pi Ven	Ar Sun	Ta Merc	Ge Ketu
Aq	 Rasi chart		Asc On Moon Jup
Op Mars			Le
Sg Rahu	Sc	Li Sat	Vi

Rahu Moon		Jupiter	Mars
Saturn	Month of September 2024		
			Mercury
		Venus	Sun Ketu

Rahu	Moon	Jupiter	Mars
Saturn	Month of October 2024		
	Venus	Mercury Sun	Ketu

VEDAS

BEFORE WE GO INTO VEDAS –

WE WILL DISCUSS ABOUT DISPERSION OF LIGHT

Man observed Rainbow Position of the colour repeatedly and much before it was formally told to us. Isaac Newton is credited with explaining the dispersion of light.

Similarly, knowledge encompassing different aspect of life emerges from texts referred as VEDAS

- The Vedas, meaning “knowledge,” are the oldest texts of Humanity

- They began as an oral tradition that was passed down through generations before finally being written in Sanskrit between 1500 and 500 BCE
- Vedas are more than 3000 years old, during the earlier years it was not in written form = SRUTI
- It was taught and memorised – for it was a combination of script and chanting = UPASANA (practice)
- Secondly it had different levels and only those who qualified for higher level would have access to the knowledge.
- If it was in written form, it would be difficult to control mis-use.
- Over the years, certain portions of the hymns were written and only a few hymn / verses are now available.

WE DO NOT HAVE THE FULL VEDAS in the written form.

- The essence of the Vedas is to propound that
 - (a) Energy has manifested into Matter & will finally convert into Energy
 - (b) Beings are part of the cosmic creation and destruction

- The Vedas are structured in four different sections containing

Samhita – Brahmana – Aranyaka – Upanishad

Similar to Introduction – Theoretical Details of the Topics – Experimental

Methods and Inferences & Conclusions

- **Sage Veda Vyasa** – compiled the Vedas and recorded it.
- He categorized the Vedas into FOUR parts and taught it to his students – which became FOUR schools of study
 - **Rig-Veda** – Rishi Paila and subsequently his students
 - **Yajur Veda** – Rishi Vaishampayana and subsequently his students
 - **Sama Veda** – Rishi Jaimini and subsequently his students
 - **Atharva Veda** – Rishi Sumantu and subsequently his students

EACH VEDA has FOUR SUB-SECTIONS

1. Samhita – Hymns or mantras
2. Brahmana – Details of the Different Procedures
3. Aranyaka – Explains the symbols used including mudras during the performance of worship
4. Upanishad – Philosophical Treatises
5. **Rig Veda:**

6. **(A) Samhita:** Hymns related to the Five Elements – Earth, Water, Fire, Air, Ether
7. In more scientific terminology = Solids, Liquids, Heat, Gases, Space
8. **(B) Brahmana:** Detailed description of each of the Five Elements and its Characteristics
9. **(C) Aranyaka:** Combination of elements and its characteristics and manifestations
10. **(D) Upanishad : Aitareya** – Describes the Manifestation of the Premordial Being – creation of the universe – sustenance and dissolution of the universe; Existence of Universal Consciousness
11. Rig Veda – Rishi Paila
12. Among all the four Vedas this is the most voluminous. It describes the fundamental aspects or the essence of the universe.
13. Hymns are related to Earth, Water, Fire, Air, Ether – Elements of Nature – how they combine and manifest in various forms. It is highly mystical form and requires correct understanding.
14. **Hiranyagarbha Sukta** was revealed to Sage Prajapati Parameshi, Literal meaning is “Golden Womb”,
15. **Purusha Sukta** – literally means the PRIMAL BEING or Unmanifested Entity.
16. **Yajur Veda:**
17. **(A) Samhita:** Hymns related to the relation between being and Universe
18. In more scientific terminology = Micro and Macro Level – plant, animals, humans
19. **(B) Brahmana:** Detailed description on relation between various manifestations of the universe
20. **(C) Aranyaka:** Combination and its characteristics and manifestations
21. **(D) Upanishad (Shukla):**
22. Isavasya – Structure is fundamentally the same,
23. but it has allotropic forms
24. Example is: Carbon – Graphite, Graphene and Diamond. It is possible
25. to convert graphite to diamond.
26. Brihadaranyaka – Compilation of questions and answers – so that the
27. students understand it better. Theme is the same – micro to macro level manifestation of the supreme being or universal consciousness.

Upanishad

Taittiriya – Physical Body, Astral Body, Mind Body

Intellect Body and Self – how one can enter different layers of this body.

Katopanishad – Conversation between a Child and Sage – Is it possible to become "DEATHLESS" can one live for ever....

Yajur Veda - Rishi Vaishampayana

Yajur Veda is the only VEDA which has TWO prominent branches – KRISHNA and SHUKLA

KRISHNA YAJUR VEDA – Rishi Vaishampayana

SHUKLA YAJUR VEDA - was directly revealed to Rishi Yagnavalkya

Yajur veda hymns and verses refer to the **procedures of performing different types of Worship**

- (a) Why a particular type of worship has to be performed
- (b) Who is qualified to perform
- (c) Who is qualified to chant the appropriate verses
- (d) What time and day of the year the worship has to be formed
- (e) What is the duration of the worship
- (f) What should be the layout of the worshipping area
- (g) What offerings have to be made

Sama Veda:

- (A) **Samhita:** Hymns related to the explanation of the Universal Consciousness and how to connect with it by restraining the senses and the mind
- (B) **Brahmana:** Detailed description on relation between mind and food and water and its influence on human body.

(C) Aranyaka: Combination and its characteristics and manifestations

(D) Upanishad : CHANDOGYA UPANISHAD

(i) Sleep: Rest, Dream, Deep Sleep

(ii) Conscious mind, sub-conscious mind and super conscious mind

(iii) Food, when eaten, becomes threefold: the grossest part becomes faeces; the middle part flesh and its subtlest part mind.

(iv) Water, when drunk, becomes threefold: Its grossest part becomes urine, its middle part blood and its subtlest part Prana.

(v) Fire (i.e., in oil, butter, fat.) when eaten becomes threefold: its grossest part becomes bone, its middle part marrow and its subtlest part speech.

KENOPANISHAD

FIVE SENSE ORGANS – Eyes, Ears, Nose, Tongue and Skin

Control of the Mind on these sense organs

Conflict in the Mind : Truth and False / Right and Wrong

How to overcome Mind and Attain the state of Super Consciousness

Atharva Veda:

(A) Samhita: Hymns related to the process of enquiry, the seeker is curious to know the various aspects of the universe and its manifestations

(B) Brahmana: Details of how to enquiry, how to practice, nature of someone who is on the path of liberation;

(C) Aranyaka: Influence of external factors on internal growth of aspirants / seekers of truth

(D) Upanishad :

PRASHNA- Understanding of the Universe and the being and how they manifest through a process of Question and Answers;

MUNDAKA- Specifically for those who have chosen the path of renunciation; performing action with detachment

MANDUKYA – AUM is explained in detail, Sub-conscious, Conscious and Super-conscious states of mind – how it operates in sleep, deep sleep and dream state.

AS YOU CAN SEE THERE IS OVERLAPPING OF CONTENTS BETWEEN THE VEDAS; IT IS NOT MUTUALLY EXCLUSIVE, IT IS RELATED BUT THE EMPHASIS GIVEN UNDER EACH VEDA IS DIFFERENT.

Sama Veda (To sing the glory) – Rishi Jaimini

- The Samaveda contains 1549 verses, except 75 verses taken from the Rigveda.
- This Veda is renowned as the foundation of Indian classical music and dance and serves as a treasury of melodious chants.
- It is further categorized into two parts:

Part-I consists of melodic compositions called Gana,

Part II includes a three-verse book called Archika.

- It is important to note that the Samaveda Samhita is not intended to be read as a conventional text; rather, it is akin to a musical score sheet meant to be heard.
- It was specifically compiled for ritualistic purposes, with verses chanted during ceremonies

Atharva Veda

- The Atharvaveda provides detailed guidance on the daily rituals and procedures of life.
- The Paippalada and Saunakiya are the two surviving recensions of the Atharvaveda.
- Many of the hymns in this Veda are charms and magic spells intended to be recited by individuals seeking specific benefits or often by a sorcerer acting on their behalf.

Samhita

- **Samhita** literally means "put together, joined, union", a "collection", and "a methodically, rule-based combination of text or verses".
- *Samhitā* also refers to the most ancient layer of text in the Vedas, consisting of mantras, hymns, prayers, litanies and benedictions
- The *Vedic Samhitas* were chanted during ceremonies and rituals, and parts of it remain the oldest living part of Hindu tradition

Brahmana

- The **Brahmanas** are Vedic śruti works attached to the Samhitas (hymns and mantras) of the Rig, Sama, Yajur, and Atharva Vedas.
- They are a secondary layer or classification of Sanskrit texts embedded within each Veda, which explain and instruct on the performance of Vedic rituals
- The Brahmanas are prose texts that comment on and explain the solemn rituals as well as expound on their meaning and many connected themes. Each of the Brahmanas is associated with one of the Samhitas or its recensions

Brahmana (can be loosely translated as 'explanations of sacred knowledge or doctrine' or 'Brahmanical explanation')

- In addition to explaining the symbolism and meaning of the Samhitas, Brahmana literature also expounds scientific knowledge of the Vedic Period, including observational astronomy and, particularly in relation to altar construction, geometry.

- Divergent in nature, some Brahmanas also contain mystical and philosophical material

Aranyaka

- The **Aranyakas** are a part of the ancient Indian Vedas concerned with the meaning of ritual sacrifice.
- They typically represent the later sections of the Vedas, and are one of many layers of Vedic texts
- *Aranyakas* describe and discuss rituals from various perspectives
- *Aranyakas*, however, neither are homogeneous in content nor in structure
- *Aranyakas* are sometimes identified as *karma-kanda* , ritualistic action/sacrifice section,

Upanishads

- The **Upanishads** are late Vedic and post-Vedic Sanskrit texts that "document the transition from the archaic ritualism of the Veda into new religious ideas and institutions
- They are the most recent addition to the Vedas, the oldest scriptures of Hinduism, and deal with meditation, philosophy, consciousness, and ontological knowledge.
- The Upanishads are widely known, and their diverse ideas, interpreted in various ways, informed later traditions of Hinduism.
- The central concern of all Upanishads is to discover the relations between ritual, cosmic realities (including gods), and the human body/person

VEDANGAS – Essential Elements of Vedas

Nirukta = Etymology = Words / Context

Vyakarana = Grammar

Chandas = Meter

Shiksha = Pronunciation

Kalpa = Ritual

Jyotishya = Time

Vedangas

- Shiksha ("instruction, teaching"): phonetics, phonology, pronunciation.¹This auxiliary discipline has focused on the letters of the Sanskrit alphabet, accent, quantity, stress, melody and rules of euphonic combination of words during a Vedic recitation.
- Chandas ("metre"): This auxiliary discipline has focused on the poetic meters, including those based on fixed number of syllables per verse, and those based on fixed number of morae per verse.
- Vyakarana ("grammar"): grammar and linguistic analysis.²This auxiliary discipline has focused on the rules of grammar and linguistic analysis to establish the exact form of words and sentences to properly express ideas.
- Nirukta ("etymology"): etymology, explanation of words, particularly those that are archaic and have ancient uses with unclear meaning. This auxiliary discipline has focused on linguistic analysis to help establish the proper meaning of the words, given the context they are used in.
- Kalpa ("proper. fit"): ritual instructions. This field focused on standardizing procedures for Vedic rituals, rites of passage rituals associated with major life events such as birth, wedding and death in family, as well as discussing the personal conduct and proper duties of an individual in different stages of his life.
- Jyotisha ("astrology"): Right time for rituals with the help of position of nakshatras and asterisms and astronomy. This auxiliary Vedic discipline focused on time keeping

Vedanta = Essence of the Vedas

If all the 4 vedas are put together then it will be several thousand pages; just as a full bible would be 2000 page and a full version of the Quran 600 pages and more.

Most people want the essence of these texts

- (a) Are these texts relevant to us today ?
- (b) How will it change my life today ?
- (c) Why should I worry about it today?

Vedanta is the CONDENSED or ABRIDGED version of the VEDAS (all 4 vedas) –

Covering THE MOST ESSENTIAL ELEMENTS of the VEDAS; for some one who has limited time and wants some knowledge of the VEDAS, can ready VEDANTA.

If you get interested in the CONTENTS, then one can take up a detailed study of each of the VEDAS.

- The word "Vedanta" is a combination of two Sanskrit words: "Veda", which means "knowledge" or "the whole corpus of vedic texts", and "anta", which means "end" or "the goal of".
- Vedanta can also be interpreted as "the ultimate knowledge of the Vedas" or "the end, conclusion, or finality of knowledge".
- Vedanta is a spiritual philosophy. It's based on the idea that our real nature is pure, immortal, and free, and that the purpose of life on Earth is to realize this divinity.
- Vedanta teaches methods to help people achieve this goal, and it's considered universal in its application, relevant to all cultures, countries, and religious backgrounds.
- Over time, Vedanta has branched off into three main streams: Advaita, Viśiṣṭādvaita, and Dvaita.

Philosophy of Mahavira – Jain (700-600 BCE)

Jain= in Sanskrit = to conquer; in this context

“one who has conquered death” = NIRVANA or SALVATION

24 Thirthankaras : Rushabadeva to Mahavira (600 BCE)

After the MAHAPARI NIRVANA of MAHAVIRA ,

two separate schools of thought emerged

- (a) Svetambaras - Rituals, prayers, social welfare and spreading the teachings of the thirthankaras
- (b) Digambaras – absolute or complete renunciation - steadfast in understanding of the Self – which is the Supreme Self
- (c) TRANSITORY NATURE OF THE WORLD
- (d) – Space (akasha)
- (e) – Time (kala)
- (f) – Action (dharma)
- (g) – Inertia (being Static) (adharma)
- (h) Passion and Action (Karma) : Performing Action will result in attachment
- (i) Matter is bonded to the soul, soul needs to be detached from matter,
- (j) The method by which this detachment can be brought about is through following the great masters.
- (k) RIGHT FAITH –
- (l) RIGHT KNOWLEDGE –

(m) RIGHT CONDUCT (lot of stress on AHIMSA – Non-Violence)

Philosophy of Buddha (400-500 BCE)

Desire is the Cause for Suffering -Ignorance is the Cause for Desire

HE PRACTICED WHAT HE PREACHED

HE SAID DO NOT ACCEPT WHAT I SAY

IF YOU EXPERIENCE THE SAME ONLY THEN YOU ACCEPT IT

IF NOT YOU HAVE EVERY RIGHT TO QUESTION ME

Four Noble Truth

There is suffering

There is the cause of suffering

The cessation of suffering

The path to end the sufferings

Is Eight Fold Path

Right Understanding

Right Thought

Right Speech

Right Conduct

Right Livelihood

Right Efforts

Right Mindfulness

Right Concentration

Will lead to NIRVANA

Universal Human Values

- The purpose of his life upon earth is to follow the law (dharma) and achieve salvation (moksha) or freedom from his false self (ahamkara) by leading a balanced life in which both material comforts and human passions have their own place and legitimacy.

- The four aims are essential for the continuity of life upon earth and for the order and regularity of the world.
- They provide structure and meaning to human life and give us a reason to live with a sense of duty, moral obligation and responsibility
- Man cannot simply take birth on earth and start working for his salvation right away by means of just dharma alone.
- If that is so man would never realize why he would have to seek liberation in the first place. As he passes through the rigors of life and experiences the problem of human suffering, he learns to appreciate the value of liberation. He becomes sincere in his quest for salvation.
- So we have the four goals, instead of just one, whose pursuit provides us with an opportunity to learn important lessons and move forward on the spiritual path.
- Universal Human Values embedded in the Vedic Tradition = PURUSHARTHA and STAGES OF LIFE:
- Stage I : Is dominated by NEED, DESIRE, PASSION, = KAMA
- Stage II : Is dominated by ACQUIRING, POSSESSION, FRIENDS, RESPECT, STATUS IN SOCIETY = ARTHA
- Stage III: Is dominated by SHARING, THANKS GIVING, PHILANTHROPIC ACTIVITIES = DHARMA
- Dharma = CODE OF CONDUCT = Truthful, Cleanliness, Well Behaved, Forgiveness, No Hatred, No Jealousy
- MOKSHA: Salvation, Nirvana, Liberation,
- STAGE – I
- F = Food
- C = Clothing
- S = Shelter

STAGE - II

- F = Family
- C = Career Growth
- S = Society

STAGE - III

F = Fame

C = Contentment

S = Spirituality & Salvation

Dharma

- The first of the goals is dharma,
- Dharma is an obligatory duty to be performed by an individual in accordance with the rules prescribed

Artha

- Artha means wealth = physical or intellectual or good deeds
- recognizes the importance of not just material wealth for the overall happiness and well being of an individual.
- A house holder requires wealth, because he has to perform many duties to uphold dharma and take care of the needs of his family and society.
- A person should not seek wealth for wealth sake but to uphold dharma and help the members of his family and society achieve their goals.

Kama

- Kama in a broader sense means Desire or Passion
- Without Desire nothing is achieved.
- Desire must be controlled or regulated
- Desire or Greed is the root cause of human suffering.
- Desire leads delusion and bondage.

Moksha

- The pursuit of dharma regulates the life of a human being and keeps him on the righteous path.
- The pursuit of artha and kama enrich his experience and impart to him valuable lesson.
- The pursuit of moksha or salvation liberates him and lead him to the world Brahman. The pursuit of dharma usually begins in the early age when one is initiated into religious studies.

- The pursuit of artha and kama begins in most cases after one becomes a householder. The pursuit of moksha however is the most important of all aims and can begin at any time.
- The other aims are preparatory for this final aim.
- However, in most cases, though not correctly, moksha becomes an important pursuit in the old age during vanaprastha or the age of retirement.
- Moksha is both a purushartha and a paramartha (transcendental aim), which is important not only for men but also for the divine beings

SATTVA – RAJAS – TAMAS

COMBINATION OF PERSONALITY TRAITS MANIFEST BASED ON PLACE – TIME – PEOPLE AROUND US

WHO DECIDES YOUR BEHAVIOUR OR THE PERSONALITY TRAITS

- MIND OR BRAIN ? DO WE KNOW THE DIFFERENCE ?
- ENVIRONMENT - COLLEGE / HOME / WITH FRIENDS / IN FRONT OF PARENTS
- WATCH PEOPLE YOUNGER TO YOU; - YOU SAY HE/ SHE IS IMMATURE
- WATCH PEOPLE ELDER TO YOU – HOW YOU REACT -

TOO RIGID AND OLD STYLE OF THINKING

YOUR MIND DETERMINES YOUR PERSONALITY

YOUR MIND HAS THREE BROAD COMPONENTS

- Sattva – Positive, Disciplined, Honest, Truthful, Sincere
- Rajas – Action, movement, speech, determined efforts
- Tamas - Lazy, Relaxed, No Motivation, Procrastinate, Ignorance, Greedy

COMBINATION OF

RAJAS AND TAMAS – cruel, hurt people, cowards, create fear among people, get angry easily;

RAJAS and SATTVA – brave, supportive, good administrators, musicians,

nisargayoga.com		
Tamas	Sattva	Rajas
		
Dull mind	Clear, calm mind	Energetic mind
Obscures Awareness	Reveals Awareness	Distorts Awareness
Veiling power	Revealing power	Projecting power
Apathetic, lazy, sluggish, foggy, heaviness, prone to depression	Easy-going, balanced, peaceful, harmonious, contented	Busy, passionate, aggressive, frustrated, excited, prone to anxiety
Fear / Avoidance	Truth / Beingness	Desire / Anxiety
Allows for rest and sleep	Allows for discernment	Allows for motivation
Hinders Self-inquiry & meditation	Facilitates Self-inquiry & meditation	Hinders Self-inquiry & meditation

At the fundamental level – there are two elements – matter & energy or matter (prakriti) and spirit (purusha)

So matter and energy manifest in different forms

- 100% Energy = pure consciousness
- Ego
- Mind – is Subtle Matter
- Five Sense Organs – Ear, Skin, Nose, Tongue, Eyes
- Five Organs of Action – Hands, Legs, Mouth, Excretory Organs
- 100 % matter – Earth (bones), Water (Blood), Air (breath)

- Magnetic field exists – but one cannot see it; or we have not yet developed the technique of seeing the magnetic field
- A magnetic compass is essential to determine the direction of magnetic field
- So also PURE CONSCIOUSNESS exists – we are unable to see it or experience it

AYURVEDA

Let us understand the fundamental difference between the two types of medication

- (1) Chemical Sources Vs Natural Sources
- (2) Instant Relief Vs Long Term Relief
- (3) Life Long Medication Vs Health Food – Life Style
- (4) Significant Side Effect Vs Negligible Side Effects

1 billion Rs = 100 crores ; 1 USD = Rs. 85

9.7 billion USD = $9.7 \times 85 \times 100 = 82,450$ crores – global market for Ayurveda remedies

AYURVEDA = AYUSH + VEDA = Life + Knowledge

- Sage Agnivesha compiled the Agnivesha Samhita
- Sage Charaka was a physician, he compiled the Charaka Samhita
- Sage Vagabhat was a disciple of Sage Charaka, made significant contributions to Ayurveda
- Sage Sushruta was a surgeon who compiled the Sushruta Samhita

Which includes Plastic surgery, Neurosurgery, Orthopaedics, Pediatrics, etc

Initial days it was use of plants, vegetables and fruits as medicines

Then some of the metallic elements became part of the cure

In later years, chemically prepared products came into use – we moved to allopathic system

Follow Healthy Life Style – this will prevent disease

Once you observe the Symptoms – Take Medication immediately

Symptoms – delayed – leads to Medical Treatment / Surgery

Disease not treated completely will re-occur or may do a permanent damage to the body.

AYURVEDA classify the body into THREE major components

VATA – Space and Air (gases)

PITTA - Fire / Energy (heat) and Water (liquid)

KAPHA - Water (liquids) and Earth (solids)

Kapha Components can have varying percentages of Solid and Liquid

Example:

**Bones are mostly solid; while Blood is
mostly liquid = both are Kapha by classification**

**Similarly : Various organs of the body, tissues,
fat, muscle, bone marrow**

Sub-classification of Kapha

- 1. Kledaka Kapha : Stomach and Intestine**
- 2. Avalambaka Kapha : Lungs and Heart**
- 3. Bodhaka Kapha: Tongue and Food Track**
- 4. Tarpaka Kapha: Brain**
- 5. Shelshmaka Kapha: Joints, Ligaments**

Pitta Components can have varying percentages of Liquid and Energy (Heat)

Example: Chemical Reactions can be endothermic or exothermic or at constant temp.

Adding Salt to Water : Endothermic reaction – it absorbs heat

Adding Sugar to Water: Viscosity increases, temperature remains constant

Adding Baking soda to Water: Exothermic reaction – it generates heat

Hence to some extent affect the behaviour of the person.

Sub-classification of Pitta

- 1. Pachaka Pitta : Enzymes present in the Stomach and Intestine**
- 2. Ranjaka Pitta : Bone Marrow (synthesis of blood),
liver, kidney**

3. Sadhaka Pitta: Cells and Enzymes Present in the Brain

4. Alochaka Pitta: Cells and Enzymes Eyes and Ears

5. Bhrajaka Pitta: Cells and Enzymes Skin

Vata Components can have varying percentages of Gases & Voids (Air & Space)

Example:

Breathing – Inhale and Exhale : inhale Oxygen and Exhale: Carbon Dioxide

Typical capacity is 400-500 mL per breath

Avg person inhales and exhales = 12-20 times in a minute

Inhale in one nostril and exhale in the other nostril and it switches every 90 sec to 120 sec.

Sub-classification of Vata

- 1. Prana Vayu : Heart and Lungs**
- 2. Udana Vayu : Speech**
- 3. Samana Vayu: Stomach and Intestine gases**
- 4. Vyana Vayu: Hearing and Sensing**
- 5. Apana Vayu: Gases that are discharged**

Influence of Vatta – Pitta – Kapha on Personality

Dominated by Vata:

Quick in Action,

Slim to Moderate Built

Speech = low to medium

Grasp fast but memory is less

Neurological Problems

Dominated by Pitta:

Fond of food, they sweat easily

Impulsive behaviour

Moderate to heavy built

Issues with muscles & Joints

Speech is loud and sharp

Dominated by Kapha:

Heavy body

Speech is soft

Slow in movement & Eating

Limited knowledge

FIVE KOSHAS

The theory of Panchkosha is elucidated magnificently in Taittiriya Upanishad (Sri Aurobindo, 1981) through the way of dialogue between guru Varun and his son Bhrigu

the five layers or sheaths of the human body and mind that make up a person's personality

Panchkosha theory is based on two words panch + kosha. Panch means five and Kosha mean sheaths, layers, covers, cocoon etc. It is said that just as the silk-worm is covered within its cocoon, as a shelter around it, a human being too is covered with the five layers or sheaths which range from the coarsest to the subtlest one.

- (a) Close your nose for sometime, you become breathless – your vital body begin to react**
- (b) When you sleep – you get dreams – the mind is active, the physical body is at rest**
- (c) You read a lot, and suddenly you get a “great idea” – Intellectual body is active**
- (d) When the self leaves the body – it is called death.**

Means FIVE layers Or it is ‘technically’ FIVE Vaults, like the locker in which we store valuables, One needs to have the right key to Open each of these Vaults

- **Annamaya Kosha:** The physical layer, or food sheath
- **Pranamaya Kosha:** The life force energy layer, or vital air sheath
- **Manomaya Kosha:** The mind layer
- **Vigyanamaya Kosha:** The intellectual layer
- **Anandamaya Kosha:** The inner self, or bliss sheath

The five Koshas are guarded by the three gunas. Every individual i.e. Purusha has a nature i.e Prakriti made up of the three Gunas. The Three Gunas are sattva guna, rajas guna and tamas guna. Guna

means quality, ability or trait. The amalgamation of these three qualities in different proportions makes the Prakriti i.e. nature of an individual.

All these three gunas work together in union, as nothing is controlled by one guna. • The body is guarded by tamoguna, but rajas and sattva also affect it in a modest way. • Similarly, Ananda Maya kosha is guarded by sattva guna, but the outline of other two gunas can also be found. • The mind is also known as intellect is guarded by rajoguna, but there is a trace of the other two gunas

“the quantum of the gunas in each kosha can be changed. For example, the body is predominantly tamasic, but by the practices of yoga, sattvic food and a regular physical activity, there can be increase in sattva guna in the body. In the same way, you can change the quantum of the gunas in each kosha”.

When you change the quantum of the gunas in these five koshas through the yoga practices, a balance is created and when the balance is created, then greater awareness takes place. These five koshas are separate classifications. You can experience them during your yoga practice. When you meditate, you pierce through or penetrate each and every kosha.
